Question 01

In [9]:
```
multiply= lambda a,b: a*b
print(multiply(5,6))
```

```
30
```

Question 02

In [17]:
```
import math

def area(radius):
    return math.pi * radius ** 2

print(area(10))
```

```
314.1592653589793
```

Question 03

In [1]:
```
def calculator(a, b, operation):

    if operation == 'a':
        return a + b

    elif operation == 's':
        return a - b

    elif operation == 'm':
        return a * b

    elif operation == 'd':
        return a / b

print(calculator(2, 5, 'd'))
```

```
0.4
```

Question 04

In [34]:
```
class Rectangle:

    def __init__(self, length, width):
        self.length = length
        self.width = width

    def area(self):
        return self.length * self.width

r = Rectangle(5, 10)
print(r.area())
```

```
50
```

Question 05

In [32]:
```
class Square:

    def __init__(self, name, side):
        self.name = name
        self.side = side

    def area(self):
        return self.side * self.side

    def describe(self):
        print("This is a:", self.name)

s = Square('square', 5)

print("The area is:")
print(s.area())

s.describe()
```

```
The area is:
25
This is a: square
```
